

Dana Motion Systems GmbH – Environmental Policy

Environmental Policy and Statement of Principles

DIN EN ISO 14001:2021

In our company, environmental protection is an important part of the corporate policy. We are aware that our activities affect the environment. Therefore, it is our duty to reduce the impact on the environment to the possible minimum within the scope of economic and technical possibilities and by means of well-thought-out processes. Our responsibility in dealing with the environment and resources requires the identification and evaluation of our significant environmental aspects as well as the fulfillment of defined environmental goals and programs and their verification based on measurable characteristics.

Based on our shared responsibility towards people and the environment, we have set ourselves the goal of reconciling profitable production and environmental precaution by improving environmental performance and avoiding or reducing environmental pollution wherever this is technically and organizationally possible and economically viable. In doing so, it is a matter of course for us to comply with legal and official regulations and other environmental interests as well as the environmental protection requirements we set ourselves and to exceed them wherever possible.

Every employee is integrated into our management system and has the right and the duty to work towards eliminating circumstances that cause unnecessary burdens on the environment. Through information and training, we promote environmentally conscious behavior on the part of our employees both inside and outside the company.

The continuous improvement of our environmental performance is also a prerequisite for us in the medium and long term to effectively reduce costs and make an important contribution to protecting the environment.

A trouble-free organization, advanced management methods and the state of the art in environmental technology provide the necessary framework for this. Managers are obliged to apply the management practices in force in their area of responsibility, to constantly monitor their effectiveness and to adapt them to the latest knowledge and requirements.

As part of our corporate duty of care, this management manual sets out our environmental policy with the overall environmental objectives and principles of action of our company.

Our company operates and implements an environmental management system oriented to the identified normative, legal and internal requirements and specifications, maintains it and constantly improves its effectiveness.

Our environmental management manual represents a description of the environmental management system we have established. Its application ensures that contractually agreed requirements are met and that all organizational, commercial and technical activities that have an impact on the environment are planned, controlled and monitored.

By this declaration, the management commits all employees to carry out their activities in accordance with the descriptions in this management manual and the downstream work instructions, in order to ensure that the environmental specifications meet the specified and self-imposed requirements and the expectations of society.

Our goal is to continuously improve our environmental performance. The suitability, appropriateness and effectiveness of the environmental management system is regularly reviewed by management through the evaluation of results, internal audits and periodic reporting on operational environmental protection.

We provide all necessary resources to meet our environmental objectives and enforce our environmental policy.

Management evaluates itself and the degree of compliance with the standard in the company.

We are committed to the continuous improvement and development of our environmental management system.

Bad Homburg, June 2022
